DETAILED ACTION

Drawings

1. Figures 2-4 and 6 are objected to because they have numerous “hand drawn” aspects. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as “amended.” If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either “Replacement Sheet” or “New Sheet” pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 2883

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Di Pasquale et al. (6,556,346) in view of Mozdy (WO 03/012489). Di Pasquale et al. (6,556,346), herein after referred to as "Di Pasquale", teaches an optical amplifier comprising a length of erbium doped core amplifying fiber coil (108) comprising a cladding with a diameter of 90 um, (See e.g., Col. 17, ll. 49-67) and a length of between 30-40 m. (See e.g., Col. 4, ll. 10-25) However, Di Pasquale does not explicitly teach the bend radius of the coil.

Mozdy teaches a high absorption EDFA wherein it is taught that an optimal bend radi for EDFA is 16 mm (32 mm diameter). (See e.g., paragraphs 27 and 38)

It would have been obvious to one of ordinary skill in the art at the time of the invention to implement a bend radius of 16mm I the invention of Di Pasquale, as taught by Mozdy, because this would allow low bend loss while allowing for a compact device.

Regarding claims 4, 8, and 16; While Di Pasquale et al. (6,556,346) in view of Mozdy teaches clad diameters and bending radii that are close to those claimed in the instant invention, the exact claimed values are not taught. However, it would have been obvious to one of ordinary skill in the art at the time of the invention to choose the claimed values in the invention of Di Pasquale in view of Mozdy because it has been held that discovering an optimum value of result effective variables involves only routine skill in the art. In re Boesch, 617 F. 2d 272, 205 USPQ 215 (CCPAS 1980).

Art Unit: 2883

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Blaszyk et al. (6,771,865) teaches a low bend loss optical fiber. (Abstract)
